Theory Quiz

7.2V?

Below are the questions with answers

The correct answer is marked \(\subseteq \) Incorrect answers are marked \(\times \) if you answered incorrectly.

| ۱. | Providing a path to the earth often helps reduce electrostatic charge. |
|----|--|
| | ✓True False |
| 2. | Ferrous metals contain iron, therefore they cannot be magnetized. |
| | True ✓ False |
| 3. | The severity of an electric shock is dependent on the current flowing through the body, which is impacted by circuit voltage and contact resistance. |
| | ✓True False |
| 4. | Ohmmeters measure the or opposition to current flow of a circuit or component. |
| | A. voltage |
| | B. current |
| | C. power |
| | D. ✓resistance |
| 5. | A holding relay is primarily used for worker convenience. |
| | XTrue ✓False |
| 6. | The best conductors, in order of their conductivity, are: gold, silver, copper, and aluminum. |
| | True ✓False |
| 7. | What is the power loss in watts of a conductor that carries 24A and has a voltage drop of |

| | A. ✓ 175W |
|------|--|
| | B. 350W |
| | C. 700W |
| | D. 2,400W |
| | |
| 8. | What is the conductor power loss in watts for a 120V circuit that has a 3 percent voltage drop and carries a current flow of 12A? |
| | A. ✓ 43W |
| | B. 86W |
| | C. 172W |
| | D. 1,440W |
| | |
| 9. | Kirchoff's Voltage Law states that in a series circuit, the sum of the voltage drops across all of the resistors will equal the applied voltage. |
| | ✓True False |
| | |
| 10. | When power supplies are connected in parallel, the voltage remains the same, but the current or amp-hour capacity will be increased. |
| | ✓True False |
| 11. | Improper wiring or mishandling of multiwire branch circuits can cause connected to the circuit. |
| | A. overloading of the ungrounded conductors |
| | B. overloading of the grounded (neutral) conductors |
| | C. destruction of equipment because of overvoltage |
| | D. ✓b and c |
| 12 | . Metal parts of premises wiring must be bonded to a low-impedance path designed so that the |
| ۱ ۷. | circuit protection device will quickly open and clear a ground fault. |
| | ✓ True |

False

| 13. Inverse-time breakers operate on the principle that as the current decreases, the time it takes for the device to open decreases. | |
|--|--|
| XTrue ✓False | |
| 14. Factors that impact the available short-circuit current include transformer | |
| A. voltage | |
| B. kVA rating | |
| C. impedance | |
| D. ✓all of these | |
| 15. Equipment must have a(n) current rating that permits the protection device to clear a short circuit or ground fault without extensive damage to the components of the circuit. | |
| A. overload | |
| B. ✓short circuit | |
| C. ground fault | |
| D. ×b or c | |
| 16. Severe electric shock or death can occur if a person touches the ungrounded and the grounded (neutral) conductors at the same time, even if the circuit is GFCI protected. | |
| ✓True XFalse | |
| 17. An AFCI protection device provides protection from an arcing fault by recognizing the characteristics unique to an arcing fault and by functioning to de-energize the circuit when an arc fault is detected. | |
| ✓True False | |
| 18. Even when power is removed from the circuit, capacitors can store large amounts of energy for a long period of time. They can discharge and arc if inadvertently shorted or grounded out. | |
| ✓True False | |

| conductors (CEMF) that repels the flowing electrons toward the surface of the conductor. This is called |
|---|
| A. eddy currents |
| B. induced voltage |
| C. impedance |
| D. ✓skin effect |
| 20. AC inductive or capacitive reactive loads cause the voltage and current to be in-phase with each other. |
| True False |
| 21. Dual-voltage ac motors are made with two field windings. The field windings are connected in for low-voltage operation and in for high-voltage operation. |
| A. series, parallel |
| B. ✓parallel, series |
| C. series, series |
| D. parallel, parallel |
| 22. If the rotating part of the motor winding is jammed so that it cannot rotate, no CEMF will be produced in the motor winding. Result the motor operates at and the windings will be destroyed by excessive heat. |
| A. FLA |
| B. FLC |
| C. ✓LRC |
| D. any of these |
| 23. Swapping of the line conductors can reverse a 3Ø ac motor's rotation. |
| A. one |
| B. ✓ two |
| C. three |
| D. none of these |

| secondary turns as compared to the number of primary turns. |
|---|
| ✓True False |
| 25. Three-phase, wye-connected systems can overheat because of circulating odd triplen harmonic currents. |
| A. 2-wire |
| B. ×3-wire |
| C. ✓4-wire |
| D. none of these |
| |
| |
| |

24. Voltage induced in the secondary winding of a transformer is dependent on the number of

| Understanding NEC Volume 1 |
|--|
| Understanding NEC, Volume 1 |
| Below are the questions with answers The correct answer is marked ✓Incorrect answers are marked Xif you answered incorrectly. |
| 1. When rigid metal conduit is threaded in the field, a standard die with shall be used. |
| A. |
| B. 1 in. taper per foot |
| C. 1/16 in. taper per foot |
| D. no taper |
| 344.28 |
| |
| |
| 2. Nails or screws can fasten boxes to structural members of a building using brackets on the outside of the enclosure, or they can pass through the interior within of the back or ends of the enclosure. Screws are not permitted to pass through the box unless exposed threads in the box are protected using approved means to avoid abrasions of conductor insulation. |
| |
| A. 1/8 in. |
| B. ×1/16 in. |
| C. √ 1/4 in. |

D. 1/2 in.

A. 5

| 3. | | shall be firmly fastened within of each outlet box, junction box, device box, fittinet, or other conduit termination. | |
|-------|---------|--|--|
| | A. | × 12 in. | |
| | B. | 18 in. | |
| | C. | 2 ft | |
| | D. | √ 3 ft | |
| 342.3 | 0(A) | | |
| | | | |
| 4. | accid | arts of electrical equipment operating at or more shall be guarded against ental contact by approved enclosures or by suitable permanent, substantial partitions, or as arranged so that only qualified persons have access to the space within reach of the arts. | |
| | A. | 20V | |
| | B. | 30V | |
| | C. | √ 50V | |
| | D. | 100V | |
| 110.2 | 7(A)(2) | | |
| 5. | Handl | nole enclosures shall be designed and installed to withstand | |
| | A. | 3,000 lb | |
| | B. | 6,000 lb | |
| | C. | ✓all loads likely to be imposed | |
| | D. | × 600 lb | |
| 314.3 | 0 | | |
| 6. | floors | ENT is installed concealed in walls, floors, and ceilings of buildings exceeding three above grade, a thermal barrier shall be provided having a minimumminute finish as listed for fire-rated assemblies. | |

| B. | 10 |
|--------------|---|
| C. | √ 15 |
| D. | × 30 |
| 362.10(2) | |
| | |
| | |
| | installing raceways underground in rigid nonmetallic conduit and other approved rays, there shall be a minimum of of cover. |
| A. | 6 in. |
| B. | 12 in. |
| C. | ✓ 18 in. |
| D. | 22 in. |
| Table 300.5, | Column 3 |
| | nts between lengths of ENT, and between ENT and couplings, fittings, and boxes shall be by |
| A. | a qualified person |
| В. | set screw fittings |
| C. | ✓an approved method |
| D. | exothermic welding |
| 362.48 | |
| | vays or cable trays containing electric conductors shall not contain any pipe, tube, or for steam, water, air, gas, drainage, or any service other than |
| A. | as allowed by the authority having jurisdiction |
| B. | ✓electrical |
| C. | pneumatic |
| D. | as designed by the engineer |
| 300.8 | |
| 10. Under | ground raceways and cable assemblies entering a handhole enclosure shall extend into |

the enclosure, but they are not required to be _____.

| В. | ×insulated |
|------------------|--|
| C. | ✓mechanically connected to the handhole enclosure |
| D. | below minimum cover requirements after leaving the handhole |
| 314.30(B) | |
| | |
| | umber of conductors allowed in ENT shall not exceed that permitted by the percentage ecified in |
| A. | ✓Chapter 9, Table 1 |
| B. | Table 250.66 |
| C. | Table 310.16 |
| D. | 240.6 |
| 362.22 | |
| | |
| cabine suitab | vays, cable trays, cable bus, auxiliary gutters, cable armor, boxes, cable sheathing, ets, elbows, couplings, fittings, supports, and support hardware shall be of materials le for corrosive locations |
| | wet locations |
| | |
| | v the environment in which they are to be installed none of these |
| | |
| 300.6 | |
| | |
| availa consti | event the NEC requires new products, constructions, or materials that are not yet ble at the time a new edition is adopted, the may permit the use of the products, ructions, or materials that comply with the most recent previous edition of this NEC ed by the jurisdiction. |
| A. | electrical engineer |
| | master electrician |
| C. | ✓authority having jurisdiction |
| D. | permit holder |
| | |

A. bonded

| | ment listed by a qualified electrical testing laboratory is not required to have the y-installed wiring inspected at the time of installation except to detect alterations nage. |
|-----------------|---|
| A. | external |
| B. | associated |
| C. | ✓internal |
| D. | all of these |
| 90.7 | |
| 15. Type | TC cable can be used |
| A. | for power and lighting circuits |
| В. | in cable trays in hazardous (classified) locations |
| C. | in Class 1 control circuits |
| D. | ✓all of these |
| 336.10 | |
| mater low-in | ounded systems, the electrical equipment and wiring, and other electrically conductive ial likely to become energized, are installed in a manner that creates a permanent, appedance circuit capable of safely carrying the maximum ground-fault current likely to posed on it from where a ground fault may occur to the |
| A. | ×ground |
| B. | earth |
| C. | ✓electrical supply source |
| D. | none of these |
| 250.4(A)(5) | |
| | ete, brick, or tile walls are considered as, as it applies to working space ements. |
| A. | inconsequential |
| B. | in the way |

C. ✓grounded

| D. | none of these |
|---|--|
| 110.26(A)(1) | and Table 110.26(A)(1), Condition 2 |
| | |
| 18. Electr | ical systems that are grounded shall be connected to earth in a manner that will |
| A. | limit voltages due to lightning, line surges, or unintentional contact with higher voltage lines |
| В. | stabilize the voltage-to-ground during normal operation |
| C. | facilitate overcurrent protection device operation in case of ground faults |
| D. | ✓a and b |
| 250.4(A)(1) | |
| 200.4(7)(1) | |
| | |
| 19. The grounding conductor connection to the grounding electrode shall be made by | |
| A. | listed lugs |
| B. | exothermic welding |
| C. | listed pressure connectors |
| D. | ✓any of these |
| 250.70 and 2 | 250.8 |
| | |
| | |
| 20. Metal | lic boxes are required to be |
| A. | metric |
| В. | installed |
| C. | ✓grounded |
| D. | all of these |
| 314.4 | |
| | |
| 21 Tho w | giring contained inside which of the following are required to be accessible? |
| 21. The wiring contained inside which of the following are required to be accessible? | |
| A. | Outlet boxes |
| B. | Junction boxes |

C. Pull boxes

D. Vall of these

D. Vall of these

| | threadless couplings and connectors used in the installation of RMC are buried in nry or concrete, they shall be of the type. |
|------------|---|
| A. | raintight |
| В. | wet and damp locations |
| C. | ×nonabsorbent |
| D. | ✓concrete-tight |
| 344.42(A) | |
| 23. The fo | ollowing systems shall be installed in accordance with the NEC: |
| A. | signaling |
| B. | communications |
| C. | power and lighting |
| D. | ✓all of these |
| 90.2(A) | |
| 24. EMT : | shall not be used where |
| A. | subject to severe physical damage |
| В. | protected from corrosion only by enamel |
| C. | used for the support of luminaires |
| D. | ✓any of these |
| 358.12 | |
| _ | rounding electrode conductor is the conductor used to connect the grounding electrode equipment grounding conductor and the grounded conductor at |
| A. | Xthe service |
| B. | each building or structure supplied by feeder(s) |
| C. | the source of a separately derived system |

| The correc | Below are the questions with answers t answer is marked ✓Incorrect answers are marked Xif you answered incorrectly. |
|-------------|---|
| | ded conduits or fittings referred to in hazardous (classified) locations shall be I with a taper per foot. |
| A. × | ½ in. |
| В. 🗸 | ³¼ in. |
| C. 1 | in. |
| D. al | I of these |
| 500.8(D) | |
| | III, Division location is where easily ignitible fibers or combustible flying materiaed or handled but not manufactured. |
| A. × | 1 |
| В. 🗸 | 2 |
| C. 3 | |
| D. al | I of these |
| 500.5(D)(2) | |
| | rstem equipment supplied by branch-circuit power shall not be located within of e wall of a pool, spa, hot tub, fountain, or tidal high-water mark. |
| A. 2 | ft |
| В. 🗙 | 10 ft |
| C. 🗸 | 5 ft |
| D. 18 | 8 in. |
| | |

640.10(A)

| 4. | permanently affixed labels with the wording "Intrinsic Safety Wiring." The labels shall be visible after installation and the spacing between labels shall not exceed ft. |
|-------|---|
| | A. 3 |
| | B. ×10 |
| | C. ✓ 25 |
| | D. 50 |
| 504.8 | 0(B) |
| | |
| 5. | For listed explosionproof equipment, factory threaded entries shall be made up with at least threads fully engaged. |
| | A. 4 |
| | B. ✓ 4½ |
| | C. 5 |
| | D. ×6 |
| 500.8 | (D) Ex |
| | |
| 6. | No seal is required if a conduit (without unions, couplings, boxes, or fittings) passes completely through a Class I, Division 2 location if the termination points of the unbroken conduit are in unclassified locations and it has no fittings less than beyond each boundary of the classified location. |
| | A. 6 in. |
| | B. ✓ 12 in. |
| | C. 18 in. |
| | D. 24 in. |
| 501.1 | 5(B)(2) Ex 1 |
| | |
| 7. | Conductors and cables of intrinsically safe circuits not in raceways or cable trays shall be separated by at least and secured from conductors and cables of any nonintrinsically safe circuits. |
| | A. 6 in. |
| | B. √ 2 in. |
| | C. 18 in. |

| 504.30(A)(3) | |
|--------------|---|
| | |
| | ss I, Division 1 locations, all apparatus and equipment of signaling, alarm, e-control, and communications systems,, shall be identified for Class I, Division 1 ons. |
| A. | above 50V |
| В. | above 100 volts-to-ground |
| C. | ✓regardless of voltage |
| D. | except under 24V |
| 501.150(A) | |
| , | |
| | |
| 9. Intrins | sically safe and associated apparatus are permitted to be installed in |
| A. | ✓any hazardous (classified) location for which they have been identified |
| В. | XClass I locations |
| C. | Class II locations |
| D. | Class III locations |
| 504.10(B) | |
| 00 0(2) | |
| | ardous (classified) locations, intrinsically safe apparatus shall in the hazardous ified) location in accordance with 250.100. |
| A. | be secured |
| В. | ✓be bonded |
| C. | e painted |
| D. | Xnot be used |
| 504.60(A) | |
| | |
| 11. Class | II locations are those that are hazardous because of the presence of |
| A. | ✓combustible dust |

B. easily ignitible fibers or flyings

D. 12 in.

| 500.5(C) | |
|--------------|---|
| of suit | L cables with a gas/vaportight, continuous-corrugated metallic sheath, an overall jacket table polymeric material, and provided with termination fittings listed for the application in class I, Division 1 establishments with restricted public access. |
| A. | commercial |
| B. | ✓industrial |
| C. | institutional |
| D. | ×all of these |
| 501.10(A)(1) | (d) |
| | and fittings used for taps, joints, or terminal connections shall be where installed ss II, Division 1 hazardous (classified) locations. |
| A. | ×explosionproof |
| B. | ✓identified for Class II locations |
| C. | dusttight |
| D. | weatherproof |
| 502.10(A)(1) | (4) |
| | sically safe conduit or cable runs that leave a Class I or II location shall be sealed. The hall be |
| A. | explosionproof or flameproof |
| B. | flameproof |
| C. | ×a and b |
| D. | ✓none of these |
| 504.70 | |
| 15. Equip | ment is required to be identified not only for the class of location but also for the |

explosive, combustible, or ignitible properties of the specific _____ that will be present.

C. flammable gases or vapors

D. Xflammable liquids or gases

| B. | dust |
|------------------------------|---|
| C. | fiber or flyings |
| D. | ✓all of these |
| 500.8(A)(1) | |
| | |
| | ical equipment installed in hazardous (classified) locations shall be constructed for the division, and group. An atmosphere containing is classified as Group C. |
| A. | hydrogen |
| В. | ✓ethylene |
| C. | propylene oxide |
| D. | Xall of these |
| 500.6(A)(3) F | FPN |
| | |
| interc (class A. B. | sembly of interconnected intrinsically safe apparatus, associated apparatus, and onnecting cables designed so that those parts of the system used in hazardous ified) locations are intrinsically safe circuits is a(n) Vintrinsically safe system safe location reclassified location |
| D. | associated system |
| 504.2 | |
| | peakers of a permanent audio system which are installed in a fire-resistance rated on, wall, or ceiling shall be listed for the purpose or installed in an enclosure or recess |
| A. | ✓maintains the fire-resistance rating |
| В. | Xis no more than 4 in. deep |
| C. | is no more than 6 ft 6 in. high |
| D. | all of these |
| | |

A. gas or vapor

| | eaded conduits or fittings referred to in hazardous (classified) locations shall be made htight in order to |
|-----------------|---|
| A. | prevent sparking when a fault current flows |
| | ensure the explosionproof or flameproof integrity of the conduit system |
| | ✓a and b |
| D. | none of these |
| 500.8(D) | |
| | uctors of intrinsically safe circuits shall not be placed in any with conductors of any trinsically safe system. |
| A. | raceway |
| В. | cable tray |
| C. | cable |
| D. | ✓any of these |
| 504.30(A)(1) | |
| | vays permitted as a wiring method in Class II, Division 2 hazardous (classified) locations le |
| A. | ×rigid metal conduit and intermediate metal conduit |
| В. | electrical metallic tubing |
| C. | rigid nonmetallic conduit |
| D. | ✓a or b |
| 502.10(B)(1) | |
| struct norma | cables installed exposed on the surface of ceilings and walls shall be supported by the ural components of the building in such a manner that the cable will not be damaged by all building use. Such cables shall be supported by designed and installed so as not nage the cable. |
| A. | straps |
| | staples |
| C. | hangers |
| | ✓any of these |

| 23. | Audio system equipment (speakers) powered by a listed Class 2 power supply, or by the |
|-----|--|
| | output of an amplifier listed for use with Class 2 wiring, shall only be restricted in its |
| | placement by |

- A. Vthe manufacturer's recommendations
- B. 640.10(A), within 6 ft of water
- C. Xthe local authority having jurisdiction
- D. the desires of the owner

640.10(B)

- 24. When seals are required for Class I locations, they shall comply with the following rule(s):
 - A. They shall be listed for Class I locations and shall be accessible.
 - B. The minimum thickness of the sealing compound shall not be less than the trade size of the sealing fitting and, in no case, less than 5/8 in.
 - C. Splices and taps shall not be made in the conduit seal.
 - D. Vall of these

501.15(C)(1), (2), (3), and (4)

- 25. Raceways permitted as a wiring method in Class II, Division 1 hazardous (classified) locations include _____.
 - A. Vthreaded rigid metal conduit and intermediate metal conduit
 - B. rigid nonmetallic conduit
 - C. electrical metallic tubing
 - D. any of these

502.10(A)(1)

Below are the questions with answers

| The correct answer is marked 🔻 | Incorrect answers are marked Xif you ansv | wered incorrectly |
|--------------------------------|---|-------------------|
|--------------------------------|---|-------------------|

| 1. | A(n) is an unintentional, electrically conducting connection between an ungrounded conductor of an electrical circuit and the normally non current-carrying conductors, metallic enclosures, metallic raceways, metallic equipment, or earth. |
|-------|--|
| | A. grounded conductor |
| | B. ✓ground fault |
| | C. equipment ground |
| | D. bonding jumper |
| 250.2 | |
| 2. | For grounded systems, noncurrent-carrying conductive materials enclosing electrical conductors or equipment, or forming part of such equipment, shall be connected to earth so as to limit the voltage-to-ground on these materials. |
| | ✓True False |
| 250.4 | (A)(2) |
| 3. | For ungrounded systems, non current-carrying conductive materials enclosing electrical conductors or equipment, or forming part of such equipment, shall be connected together and to the supply system grounded equipment in a manner that creates a permanent, low-impedance path for ground-fault current that is capable of carrying |
| | A. the maximum branch circuit current |
| | B. at least twice the maximum ground fault current |
| | C. ✓the maximum fault current likely to be imposed on it |
| | D. the equivalent to the main service rating |
| 250.4 | (B)(2) |
| 4. | Grounding electrode conductor fittings shall be protected from physical damage by being enclosed in where there may be a possibility of physical damage. |

B. Xwood

A. metal

| D. none of these |
|--|
| 250.1 |
| |
| Where the service-entrance phase conductors are installed in parallel, the size of the grounded conductor in each raceway shall be based on the size of the ungrounded service-entrance conductor in the raceway, but not smaller than |
| A. 1 /0 AWG |
| B. 2/0 AWG |
| C. 3/0 AWG |
| D. 4/0 AWG |
| 250.24(C)(2) and 310.4 |
| |
| An unspliced that is sized based on the derived phase conductors shall be used to connect the equipment grounding conductors of a separately derived system to the grounded conductor. |
| A. ✓system bonding jumper |
| B. Xequipment grounding conductor |
| C. grounded conductor |
| D. grounding electrode conductor |
| 250.30(A)(1) |
| |
| Each tap conductor to a common grounding electrode conductor for multiple separately derived systems shall be sized in accordance with based on the derived phase conductors of the separately derived system it serves. |
| A. 250.122 |
| B. √ 250.66 |
| C. ×310.15 |
| D. 250.118 |
| 250.30(A)(4)(b) |

C. Vthe equivalent of a or b

| branch circuit serves the building or structure. |
|--|
| True ✓ False |
| 250.32(A) Ex |
| |
| High-impedance grounded neutral systems shall be permitted for three-phase ac systems of 480 volts to 1000 volts where the conditions of maintenance and supervision ensure that on qualified persons service the installation and |
| A. continuity of power is required |
| B. ground detectors are installed on the system |
| C. line-to-neutral loads are not served |
| D. ✓all of these |
| 250.36 |
| |
| 10. An electrode encased by at least 2 in. of concrete, located within and near the bottom of a concrete foundation or footing that is in direct contact with the earth, is allowed as a grounding electrode when it consists of |
| A. at least 20 ft of ½ in. or larger steel reinforcing bars or rods |
| B. at least 20 ft of bare copper conductor of 4 AWG or larger |
| C. ✓a or b |
| D. none of these |
| 250.52(A)(3) |
| |
| |
| 11 shall not be used as grounding electrodes. |
| A. Metal underground gas piping systems |
| B. Aluminum electrodes |
| C. Metal well casings |
| D. ✓a and b |
| 250.52(B)(1) and (2) |

8. A grounding electrode at a separate building or structure is required where one multiwire

| 12. Plate el | ectrodes shall be installed not less than below the surface of the earth. |
|-------------------------------|---|
| A. 8 | s ft |
| B. 2 | 4 in. |
| C. V | 7 30 in. |
| D. 1 | 8 in. |
| 250.53(H) | |
| | nultiple ground rods are used for a grounding electrode, they shall be separated not n apart. |
| A. v | ∕ 6 ft |
| B. 8 | s ft |
| C. 2 | 0 ft |
| D. 1 | 2 ft |
| 250.56 | |
| | ng electrode conductors and larger that are not subject to physical damage can exposed along the surface, if securely fastened to the construction. |
| A. v | 6 AWG |
| B. 8 | AWG |
| C. 1 | 0 AWG |
| D. 4 | AWG |
| 250.64(B) | |
| | nection of the grounding electrode conductor to a buried grounding electrode (driven rod) shall be made with a listed terminal device that is accessible. |
| × Tru ✓ Fals | |
| 250.68(A) Ex 1 | |
| 16. Metal ei | nclosures and raceways for other than service conductors shall be grounded except as |

permitted by 250.112(I).

| 230.60 | |
|------------|--|
| so as | ng jumpers shall be used around knockouts that are punched or otherwise formed to impair the electrical connection to ground. Standard locknuts or bushings shall not be le means for this bonding. |
| A. | concentric |
| B. | eccentric |
| C. | field-punched |
| D. | ✓a or b |
| 250.92(B) | |
| | ment bonding jumpers shall be of copper or other corrosion-resistant material. Ang jumper shall be a or similar suitable conductor. |
| A. | conductor |
| B. | ×bus |
| C. | screw |
| D. | ✓any of these |
| 250.102(A) | |
| enclos | eneral rule for equipment bonding jumpers installed on the outside of a raceway or sure is that they are not permitted to be longer than 6 ft, but an equipment bonding or can be longer than 6 ft at outside pole locations for the purpose of bonding or |

grounding isolated sections of metal raceways or elbows installed in exposed risers of metal conduit or other metal raceways.

✓True False

250.102(E) Ex

20. Metal raceways, enclosures, frames, and other noncurrent-carrying metal parts of electric equipment installed on a building equipped with a lightning protection system may require spacing from the lightning protection conductors, typically 6 ft through air or ___ through

| dense n | naterials, such as concrete, brick, wood, etc. |
|-----------------------|---|
| A. 2 | 2 ft |
| В. 🐧 | / 3 ft |
| C. 4 | l ft |
| D. 6 | 5 ft |
| 250.106 FPNs | |
| groundi circuit d | ght flexible metal conduit (LFMC) up to trade size ½ can be used as the equipment ing conductor if the length in any ground return path does not exceed 6 ft and the conductors contained in the conduit are protected by overcurrent devices rated atwhen the conduit is not installed for flexibility after installation. |
| A. 1 | 5A |
| В. 🐧 | / 20A |
| C. > | × 30A |
| D. 6 | 50A |
| 250.118(6)(b) | |
| | ngrounded conductors are increased in size, the equipment grounding conductor is no d to be increased because it is not a current-carrying conductor. |

Below are the questions with answers

The correct answer is marked ✓Incorrect answers are marked Xif you answered incorrectly.

| 1. | What is the cross-sectional area in sq in. for 12 RHH (with an outer cover)? |
|----|---|
| | A. ×0.0117 |
| | B. ✓ 0.0353 |
| | C. 0.0252 |
| | D. 0.0327 |
| 2. | When determining the number of conductors for box fill calculations, which of the following statements is/are true? |
| | A. A luminaire stud or hickey is considered as one conductor for each type, based on the largest conductor that enters the outlet box. |
| | B. Internal factory cable clamps are considered as one conductor for one or more cable clamps, based on the largest conductor that enters the outlet box. |
| | C. The device yoke is considered as two conductors, based on the largest conductor that terminates on the strap (device mounting fitting). |
| | D. ✓all of these |
| 3. | When conductors enter an enclosure opposite a removable cover, the distance from where the conductors enter to the removable cover must not be less than |
| | A. six times the largest raceway |
| | B. eight times the largest raceway |
| | C. Xa or b |
| | D. ✓none of these |
| 4. | Determine the minimum cubic inches required for two 10 TW conductors passing through a box, four 14 THHN conductors spliced in the box, two 12 TW conductors terminating to a receptacle, and one 12 AWG equipment bonding jumper from the receptacle to the box. |

| | D. 21./5 cu in. |
|----|---|
| 5. | If a trade size 3 raceway entry (250 kcmil) is in the wall opposite a removable cover, the distance from that wall to the cover must not be less than Figure 5-37 |
| | A. 4 in. |
| | B. ✓ 4½ in. |
| | C. 5 in. |
| | D. ×6 in. |
| 6. | A raceway contains eight current-carrying conductors. What size conductor is required to feed a 21A noncontinuous lighting load? The overcurrent protection device is rated 30A. |
| | A. 14 THHN |
| | B. 12 THHN |
| | C. ✓10 THHN |
| | D. Xany of these |
| 7. | The ampacity of 10 current-carrying 6 THHW conductors installed in an 18 in. long conduit in a dry location having an ambient temperature of 39°C is |
| | A. ×47A |
| | B. ✓ 68A |
| | C. 66A |
| | D. 75A |
| 8. | Overload is the condition where current is greater than the equipment ampacity rating, resulting in equipment damage due to dangerous overheating [Article 100]. Overload protection devices, sometimes called heaters, are intended to protect the from dangerous overheating. |
| | A. ×motor |
| | B. motor control equipment |
| | C. branch-circuit conductors |
| | D. ✓all of these |
| | |
| | |

| hav | e branch-circuit conductors of a 5 hp, 230V motor with a nameplate rating of 25A must ve an ampacity of not less than Note: The motor is used for intermittent duty and, due he nature of the apparatus it drives, it cannot run for more than five minutes at any one e. |
|---------|---|
| | A. ×33A |
| | B. 37A |
| | C. ✓ 21A |
| | D. 23A |
| | e motor feeder conductor size for three 15 hp, 208V, three-phase motors; three 3 hp, 208V, gle-phase motors; and three 1 hp, 120V, single-phase motors will be |
| | A. ×2/0 AWG |
| | B. 3/0 AWG |
| | C. V 4/0 AWG |
| | D. 250 kemil |
| | e feeder protection for one 25 hp, 208V, three-phase motor, and three 3 hp, 120V, gle-phase motors will be after balancing. Note: Use inverse time breakers. |
| | A. ✓ 225A |
| | B. 200A |
| | C. 300A |
| | D. 250A |
| | equipment such as computers, laser printers, copy machines, etc., can suddenly power wn because of reduced voltage, resulting in data losses. |
| | A. Inductive |
| | B. ✓Electronic |
| | C. Resistive |
| | D. all of these |
| 13. A s | ingle-phase, 5 hp motor is located 110 ft from a panelboard. The nameplate indicates that |

the voltage is 115/230 and the FLA is 52/26A. What size conductor is required if the motor windings are connected in parallel and operate at 115V? Note: Apply the NEC recommended

| voltage-drop limits. |
|--|
| A. 10 THHN |
| B. ×8 THHN |
| C. 6 THHN |
| D. ✓3 THHN |
| 14. An existing junction box is located 65 ft from the panelboard and contains 4 THHN aluminum conductors. What size copper conductor can be used to extend this circuit 85 ft and supply a 50A, 208V load? Note: Apply the NEC recommended voltage-drop limits. |
| A. ×8 THHN |
| B. 6 THHN |
| C. ✓4 THHN |
| D. 10 THHN |
| 15. What is the voltage drop of two 4 AWG aluminum conductors that supply a 5 hp, 120V, single-phase motor that has a nameplate rating of 55A? The motor is located 95 ft from the power supply. |
| A. ×3.25V |
| B. ✓ 5.31V |
| C. 6.24V |
| D. 7.26V |
| 16. When sizing the feeder or service, each dwelling unit must have a minimum feeder load of for the two small-appliance branch circuits. |
| A. ×1,500 VA |
| B. 2,000 VA |
| C. ✓ 3,000 VA |
| D. 4,500 VA |
| 17. Household cooking appliances rated 1¾ kW can have the feeder and service loads calculated according to the demand factors of Table 220.55. |
| X True |

| | rvice contains 2 AWG conductors, what is the minimum size grounding electrode ctor required? |
|--------|---|
| A. | ✓8 AWG |
| B. | ×6 AWG |
| C. | 4 AWG |
| D. | 3 AWG |
| wall-n | eder or service neutral load for household cooking appliances, such as electric ranges, nounted ovens, or counter-mounted cooking units, is permitted to be calculated atload as determined by 220.55. |
| A. | ×50% |
| B. | 60% |
| C. | √ 70% |
| D. | 80% |
| | lling unit kitchen has the following appliances: one 9 kW cooktop and one wall-mounted ated 5.3 kW. The branch-circuit calculated load for these appliances is |
| A. | 14.3 kW |
| B. | 12 kW |
| C. | ✓8.8 kW |
| D. | 8 kW |
| dryer, | elling unit contains one of each of the following: water heater (4 kW), dishwasher (½ hp) pool pump (¾ hp), cooktop (6 kW), oven (6 kW), A/C (4 hp, 230V), and heat (6 kW). What appliance calculated load for the dwelling unit? |
| A. | √ 6.7 kW |
| В. | ×4 kW |
| C. | 9 kW |
| D. | 11 kW |

| A. | 70 kW |
|-----------------------------|---|
| В. | 23 kW |
| C. | 14 kW |
| D. | ✓33 kW |
| | |
| 23. The m | inimum feeder calculated load for two 3 kW wall-mounted ovens and one 6 kW cooktop |
| A. | √ 9.3 kW |
| В. | 11 kW |
| C. | × 8.4 kW |
| D. | 9.6 kW |
| | |
| _ | the optional calculations method, determine the calculated load for a 6 kW electric -heating unit and a 4 kW air-conditioning unit. |
| A. | ×9,000W |
| B. | 3,900W |
| C. | ✓4,000W |
| D. | 5,000W |
| | |
| for fut kW), d heatin | lling unit has 1,200 sq ft on the first floor, 600 sq ft upstairs (unfinished but adaptable ure use), a 200 sq ft open porch, and the following loads: pool pump (¾ hp), range (13.9 ishwasher (1.2 kW), water heater (4 kW), dryer (4 kW), A/C (5 hp), and electric space g (6 kW). Using the optional calculation method, what size feeder/service conductor is ed for this 120/240V, single-phase service? |
| A. | 100A service with 4 AWG |
| B. | ✓110A service with 3 AWG |
| C. | X125A service with 2 AWG |
| ח | 150A service with 1 AWG |
